

More 1D Experiments

Kristyn Pantoja

7/25/2019

I. intercept at 0

II. space in-between

V. less space in-between

VI. linear vs quadratic

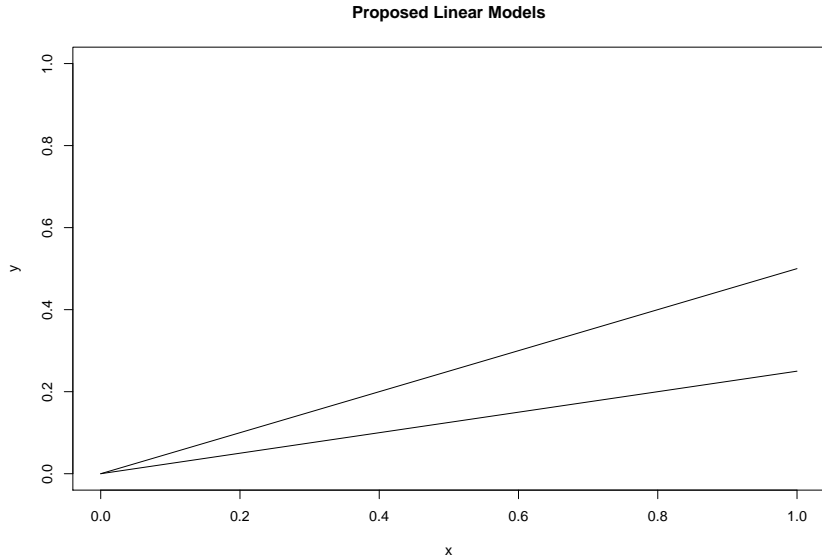

Some Observations

- ▶ Just to show that it seems

$$G - \text{Crit}_{k \rightarrow \infty} \{MED_{G,k}\} = F - \text{Crit}\{MED_F\}$$

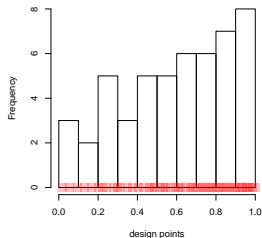

I. intercept at 0

I. Proposed Linear Models

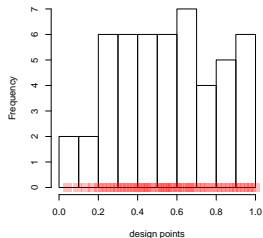

Designs, $N = 50$

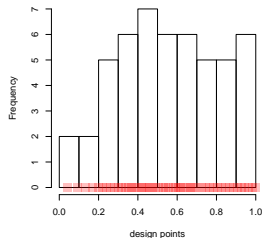

One-at-a-Time, $k = 1$

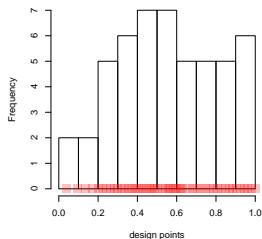

One-at-a-Time, $k = 4$

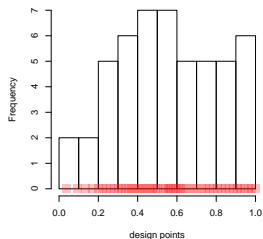

One-at-a-Time, $k = 20$

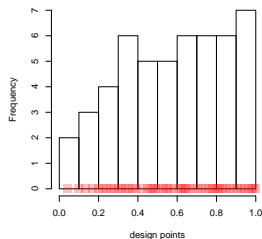

One-at-a-Time, $k = 50$

One-at-a-Time, $k = 100$

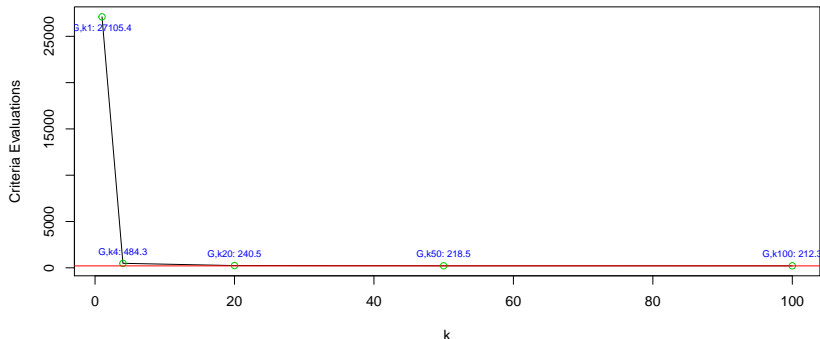

Fast, $S = 20$

Comparing Evaluations for each $N = 50$ Design

	1atT,k=1	1atT,k=4	1atT,k=20	1atT,k=50	1atT,k=100	Fast
TPE $\times 10e-3$	27.105	28.693	28.57	28.757	28.749	27.492
Fast	335.26	209.63	208.43	208.1	208.06	208.15
1atT(k=4)	502.21	484.28	480.28	480.12	479.88	469.12
Mean(D)	0.59672	0.55135	0.55316	0.55152	0.55167	0.5767
sd(D)	0.28173	0.25876	0.25893	0.25844	0.25845	0.26824

Each MED evaluated at its own criterion:

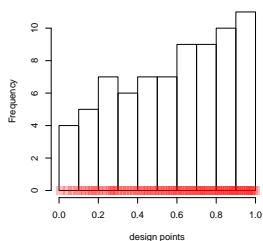

Designs, $N = 75$

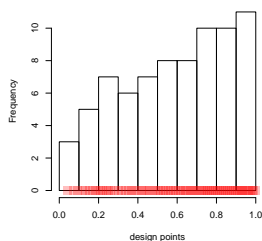

One-at-a-Time, $k = 1$

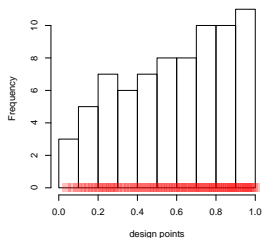

One-at-a-Time, $k = 4$

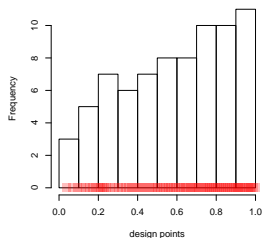

One-at-a-Time, $k = 20$

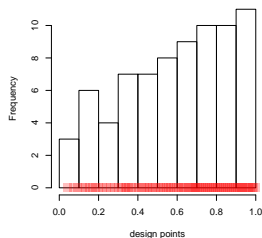

One-at-a-Time, $k = 50$

One-at-a-Time, $k = 100$

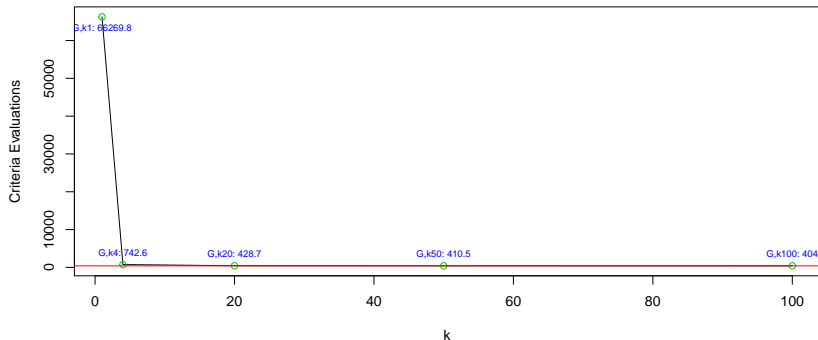

Fast, $S = 20$

Comparing Evaluations for each $N = 75$ Design

	1atT,k=1	1atT,k=4	1atT,k=20	1atT,k=50	1atT,k=100	Fast
TPE $\times 10e-3$	66.27	66.737	66.912	66.844	67.018	66.905
Fast	373.54	451.94	402	400.01	399.65	401.03
1atT(k=4)	733.35	742.62	745.74	745.07	745.91	744.47
Mean(D)	0.5874	0.58103	0.58511	0.58596	0.58528	0.59326
sd(D)	0.28154	0.28039	0.27604	0.27536	0.2764	0.27154

Each MED evaluated at its own criterion:

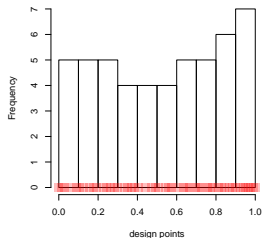

II. space in-between

II. Proposed Linear Models

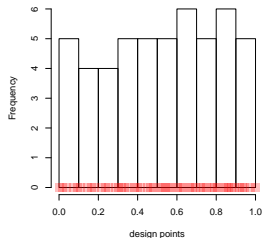

Designs, $N = 50$

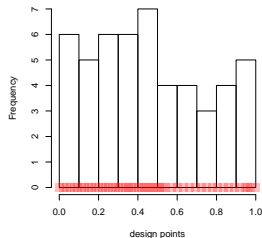

One-at-a-Time, $k = 1$

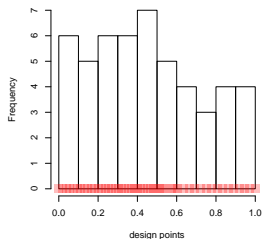

One-at-a-Time, $k = 4$

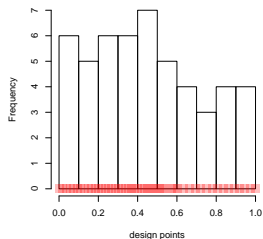

One-at-a-Time, $k = 20$

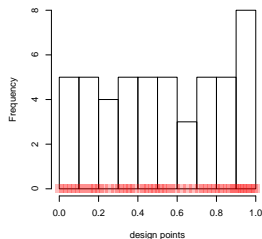

One-at-a-Time, $k = 50$

One-at-a-Time, $k = 100$

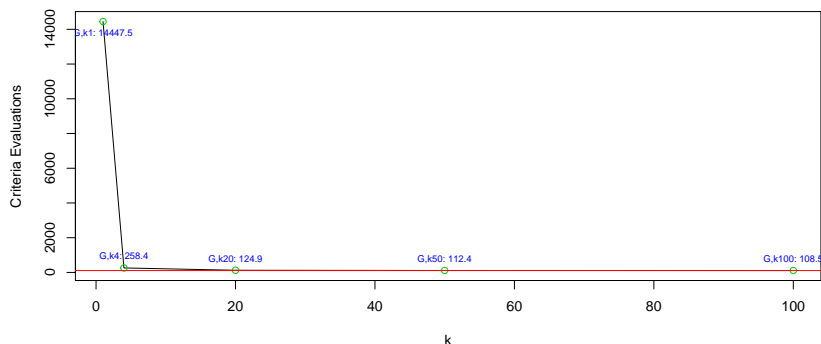

Fast, $S = 20$

Comparing Evaluations for each $N = 50$ Design

	1atT,k=1	1atT,k=4	1atT,k=20	1atT,k=50	1atT,k=100	Fast
TPE $\times 10e-3$	14.448	14.712	15.394	15.558	15.558	14.271
Fast	144.42	105.58	105.23	105.32	105.32	108.16
1atT(k=4)	266.3	258.43	259.47	259.44	259.44	240.49
Mean(D)	0.53194	0.5202	0.45769	0.45036	0.45036	0.52515
sd(D)	0.3106	0.2927	0.29233	0.28393	0.28393	0.31158

Each MED evaluated at its own criterion:

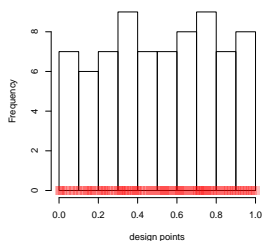

Designs, $N = 75$

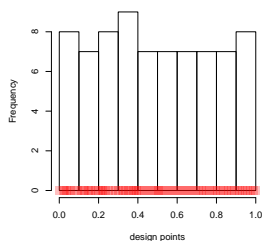

One-at-a-Time, $k = 1$

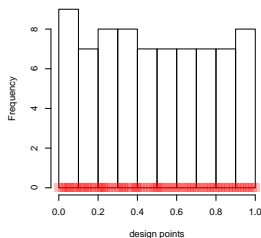

One-at-a-Time, $k = 4$

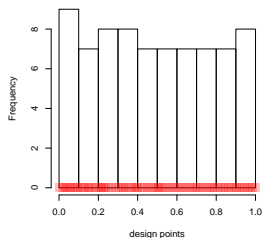

One-at-a-Time, $k = 20$

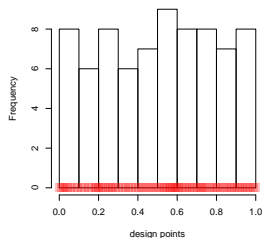

One-at-a-Time, $k = 50$

One-at-a-Time, $k = 100$

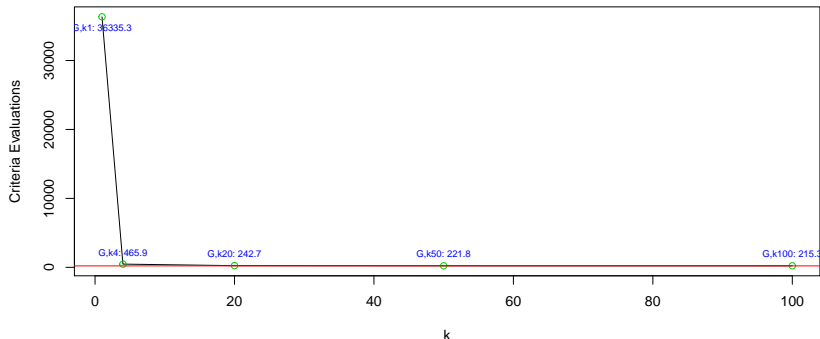

Fast, $S = 20$

Comparing Evaluations for each $N = 75$ Design

	1atT,k=1	1atT,k=4	1atT,k=20	1atT,k=50	1atT,k=100	Fast
TPE $\times 10e-3$	36.335	37.069	37.248	37.135	37.135	37.067
Fast	302.5	210.13	210.08	209.66	209.66	209.51
1atT(k=4)	492.53	465.92	466.77	466.43	466.43	451.56
Mean(D)	0.52681	0.51185	0.48986	0.48604	0.48604	0.50762
sd(D)	0.30757	0.28924	0.2955	0.29894	0.29894	0.2923

Each MED evaluated at its own criterion:

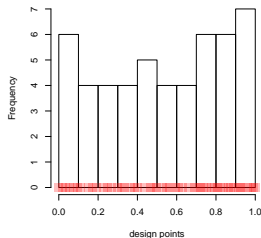

V. less space in-between

V. Proposed Linear Models

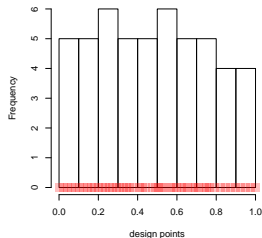

Designs, $N = 50$

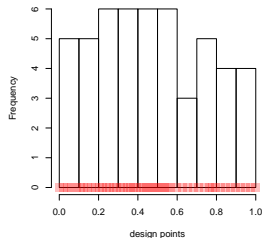

One-at-a-Time, $k = 1$

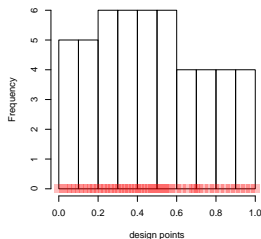

One-at-a-Time, $k = 4$

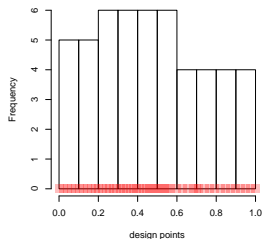

One-at-a-Time, $k = 20$

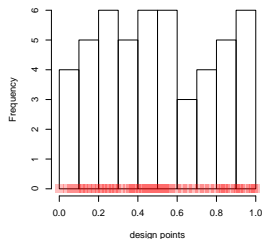

One-at-a-Time, $k = 50$

One-at-a-Time, $k = 100$

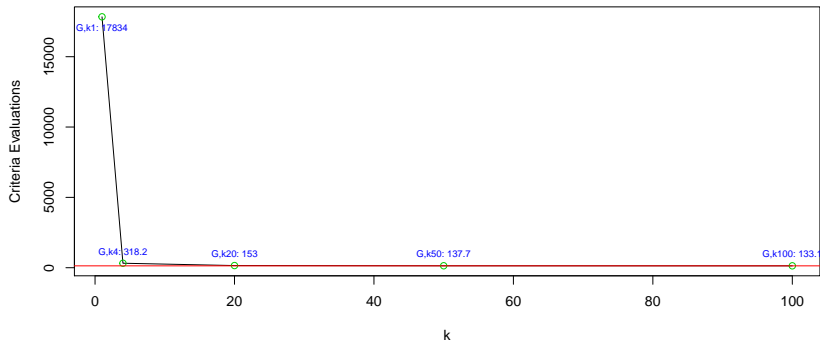

Fast, $S = 20$

Comparing Evaluations for each $N = 50$ Design

	1atT,k=1	1atT,k=4	1atT,k=20	1atT,k=50	1atT,k=100	Fast
TPE $\times 10e-3$	17.834	18.691	19.038	19.067	19.064	18.559
Fast	179.04	130.52	130.62	130.94	130.93	132.39
